

Tracknov

AI-powered certification execution for green buildings

Khushalchand Borana | Enov360

Certification Is Broken

Excel & Emails

Certification teams rely on fragmented spreadsheets and unstructured email chains – no single source of truth.

No Workflow

Without structured processes, teams lose track of credits, submittals, and deadlines across complex projects.

Consultant Lock-in

Heavy dependence on individual consultants creates bottlenecks and makes institutional knowledge non-transferable.

Rework & Delays

Non-compliance and missing documentation drive **20–40% rework** – inflating costs and stretching timelines.

THE SOLUTION

Tracknov = Workflow + AI Engine

Tracknov replaces scattered tools with a single, intelligent platform purpose-built for green building certification.

→ Structured Hierarchy

Credits → Submittals → Documents — every requirement is mapped and tracked automatically.

→ Compliance Enforcement

Configurable, rule-driven workflows ensure nothing falls through the cracks.

→ AI Validation & Guidance

The AI engine validates submissions, predicts gaps, and guides teams toward faster approvals.

How Tracknov Works

A fully auditable, rule-driven flow from project intake to final certification approval – no manual tracking required.

 Rule-Driven Every step enforces IGBC logic automatically.	 Fully Auditable Complete audit trail for every submission and review.	 No Manual Tracking AI handles status updates, alerts, and validation.

A Large & Growing Market

10K+

IGBC Projects

Active registered projects in India driving certification demand

15%

CAGR

Green building market growth rate (12–15% annually)

₹50L

Avg. Cert. Cost

Per project certification spend ranging ₹5L–₹50L

Serviceable Market Opportunity

With thousands of active IGBC projects and rising compliance mandates, Tracknov targets a serviceable market of

₹500–1,500 Cr+

in addressable certification services and SaaS fees across India's green building sector.

Who We Serve

Developers

Large-scale real estate and infrastructure developers managing multiple concurrent green certifications.

Consultants

Green building consultants who coordinate compliance across many client projects simultaneously.

Hospitality

Premium hotel brands like **Taj** pursuing IGBC certification for their properties.

QSR Chains

Quick-service restaurant networks like **Burger King** scaling green-certified outlet rollouts.

Data Centers

High-energy facilities increasingly mandated to meet green building standards.

Business Model

1

Per-Project Fee

₹50K-₹2L per certification project, tiered by complexity and building type.
Immediate, transactional revenue from day one.

2

Enterprise Subscription

Recurring annual contracts for developers and consultants managing large portfolios of projects on the platform.

3

AI Premium Modules

Future upsell layer: advanced AI analytics, predictive compliance scoring, and automated reporting for power users.

Traction & Competitive Edge

Named Clients

Already working with marquee names – **Taj Hotels** and **Burger King India** – validating enterprise-grade credibility.

16+ Years Domain Expertise

The founding team carries deep, hard-won knowledge of IGBC processes – not easily replicated by generalist SaaS players.

IGBC Gold Track Record

Proven execution of IGBC Gold-level certifications, establishing Tracknov's credibility with the certifying body itself.

👉 Strong domain moat – 16 years of IGBC expertise embedded directly into the product's logic layer.

Why Tracknov Wins

MANUAL CONSULTANTS

MANUAL CONSULTANTS

- High Cost
- No Audit Trail
- Person-Dependent
- No Scalability

GENERIC SAAS

GENERIC SAAS

- No IGBC Logic
- No Compliance Enforcement
- Manual Workarounds Needed

TRACKNOV

TRACKNOV

- Built-in IGBC Workflow Engine
- AI Validation & Audit System
- Scalable, Hard to Replicate

Our Defensible Advantage

Competitors fall into two camps – neither serves the green building certification market well:

- **Manual consultants** are expensive, unscalable, and create knowledge silos.
- **Generic SaaS tools** lack IGBC-specific logic and require extensive manual workarounds.

Tracknov is purpose-built: IGBC compliance logic, AI-driven audit, and workflow enforcement are baked into the core – making it genuinely **hard to replicate**.

Funding Round & Vision

Current Raise

₹2-5 Cr

Use of funds:

- **Product:** Core platform depth and reliability
- **AI:** Advanced validation and predictive modules
- **Sales:** Enterprise customer acquisition and channel partnerships

Our Vision

Tracknov will become the **operating system for green building certification** in India – and eventually across all emerging markets adopting structured sustainability mandates.

Every IGBC project, every credit, every document – orchestrated through one intelligent platform.
